

My name is Satyam, I have completed a Master in computer application from Parul university. Currently I am associated with Rishabh Software since 2023. I have a total of 2+ years of experience in PHP and its framework like: Laravel, CodeIgniter. Additionally, I have knowledge of jQuery, JavaScript, MySQL, REST API and Github.

I have worked on certain projects based on these technologies.

Facility management System, where had a chance to interact with the business flow complexity for the onboarding employee to the end of the process. My Roles and responsibility is to maintain the site and work on the new development for this application.

I have previous experience in this same techstack where I got the opportunity to work on the same domain, like:

B2B ERP based system that has a number of client requirements. HRMS system - Is leveraging the facility to the organization to enrich the extra features like Task management, QA Portal, IT support etc. I have also worked on the development of the static website in WordPress for the real estate domain.

For adding more technology into my stack I have completed a max muller Vue Js course from Udemy.
